

The isaac™ System

Equipping People for Independence

The isaac™ system is:

- A fully individualized and adaptable system specifically designed for individuals with a wide range of cognitive disabilities and challenges;
- Graphically and contextually oriented;
- Delivers fully individualized spoken behavioral prompts and text or spoken procedural content English or Spanish;
- Hosted on a small, wearable, battery powered, affordable device with touch screen interface;
- Easily adaptable as user needs and capabilities change in the future; and
- A high life cycle value for a modest initial cost.

The isaac system was designed to assist people with cognitive disabilities live more independently. This includes:

- Reducing their dependence on ongoing caregiver services;
- Enabling them to remain living in their own homes longer;
- Allowing for the most natural possible living, self-care, and employment situations; and
- Enabling them to be successful in much less intensive and costly care situations than otherwise possible.
